

GrandCare has made our staff more efficient, while improving the quality of care. Our residents love it. Connecting them to family has reduced isolation and made residents happier to be at Evergreen. It's given us a game-changing advantage over our competitors.

Evergreen Admin

Senior Housing Communities

What is GrandCare?

GrandCare is a large, easy-to-read touchscreen that goes into the residence of the care recipient. To them, the GrandCare is a source of information and family communication. It has a simple one-touch video chat, photo/video sharing, music, messaging, games, and more. But GrandCare can also help the individual remain safer, happier and healthier, no matter where they choose to live. Optional activity sensors, medication management features, and telehealth devices can message or call designated caregivers if something seems wrong, or if a potential health concern is detected. Family members and caregivers simply log into the GrandCare website or app to communicate, monitor and manage the GrandCare System. Professional pricing and discount packages available.

For Senior Communities

In today's world, residents expect more from their senior housing communities than menus tacked onto bulletin boards and trips to the front desk for information. Families expect cutting-edge technology, concierge service offerings, and caregiving transparency.

GrandCare can take your community to a new level by adding easy-to-use touchscreen portals in every resident's room.

Residents will enjoy games, photos/videos, video chatting, activity schedules, a resident directory, community broadcasts and the ability to easily request services (transportation, maintenance, dining, etc.). Share flyers, menus, calendars and more!

Optional activity and telehealth sensors can be added on to any GrandCare System.
